

ENVIRONMENTAL POLICY

IPT Ltd is an environmentally conscious organisation which acknowledges the impact that the organisation and that of its suppliers may potentially have on the environment.

IPT Ltd has a clear objective on how it minimises the impact it and its suppliers have on the environment by:

- Working with suppliers who have in their production and transportation policies an acceptable environmental policy that covers the objectives of IPT Ltd, and who work under the relevant WEEE and RoSH directives
- By working with our suppliers to ensure that parts and components are sourced from environmentally aware suppliers
- By encouraging our suppliers to ensure that their manufacturing processes use the most effective methods to reduce waste and that any waste is re-used or follows the WEEE directive
- To reduce and re-use packaging and recycle where ever possible
- To continually review operational and manufacturing processes with an objective of reducing the use of energy consumption
- To use the most environmental mode of transport and consolidation consignments when shipping goods

IPT and its staff will take all practical steps to ensure that any risks or hazards are identified and a suitable and effective course of remedy is implemented

All employees, sub-contractors and suppliers are expected to co-operate and assist in the implementation of this policy.

The operation of this policy and the relevant procedures will be monitored and reviewed on a regular basis.
